

TReX II 23-02 CDF

The STAAR Team needs solutions in support of an M320 Counter Defilade Fire (CDF) Tactical Engagement Simulation System (TESS) for Synthetic Training Environment Live Training Systems (STE LTS). Using an M320 TESS in standalone or M4 mounted configuration, the prototype will integrate with Government-owned devices. The interoperability between vendor and Government devices will allow detection and reporting of various weapon operation metrics of the M320.
